This invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the invention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Hunington's disease, amyotrophic lateral sclerosis); neurodegenerative diseases (e.g. Parkinson's disease, amyotrophic lateral sclerosis, neurodegenerative disease, e.g. Parkinson's disease, amyotrophic clateral sclerosis, rheumatoid arthritis, insulin-dependent diabetes mellitus); ryeloid or lymphoid cell disorders (e.g. anaemia and thrombocytopaenia); wounds, ulecars, burns; bone disorders (e.g. anaemia and thrombocytopaenia); wounds, ulecars, burns; bone disorders (e.g. asteoke, head trauma); lung or liver fibrosis; reperfusion injury in various tissues; bacterial, viral or fungal infections; allergic conditions such as allergic rhinitis, asthma; coagulation disorders (e.g. beepties) and inflammatory diseases (e.g. septic shock, Crohn's clasease, anaphylaxis). The protein may be used to inhibit the growth, infection or function of infectious agents such as bacterial, growth, infection or function of infectious agents such as bacteria, fungi, viruses, or to effect bodily characteristics, biorbythms or circadian cycles of rhythms. The protein may also have cycles of rhythms. The protein may also have cycles of rhythms. The cDNA sequence of the invention are useful for expressing recombinant protein for analysis. The preening or suppressing, chemotactic/chemotactic, human cDNA sequence of the invention, this sequence represents a novel human cDNA sequence of the invention, this sequence is a novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        myeloid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            186
                                                                                                                                                                                         The present invention relates to sphingosine kinase (SphK) polypeptides associate acids encoding them. SphK is useful for treating a SphK-associated disorder especially cancers such as leukaemia, lymphoma, ovarian, breast, lung, colon, testicular, stomach and skin, atherosclerosis, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TMF)-alpha inhibits apoptosis in human and necles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GluThrAspValHisGlvLysHisGlnGlySerGlyLysTrpGlnLysMetGluLysPro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of an isolated polynucleotide encoding human sphingosine kinase C (5KC, see AAY96059), an enzyme that phosphorylates sphingosine to form sphingosine 1-phosphate. The polynucleotide was isolated from an Hela cDNA library by PCR amplification. The invention provides polynucleotides (see AAA50508-10) and polypeptides (see AAY96057-59) for the human sphingosine kinase (5K) homologues 5KA, 5KB and 5KC. The polynucleotides may be used as hybridization probes, in the construction of PCR primers for chromosome and gene mapping, in the artisense DNA or RNA. They can be used to detect inflammation or disease associated with abnormal levels of SK expression, or to detect differences in gene sequence between normal and carrier or affected individuals. Host cells expressing SK can be used in drug screening. Human 5K specific antibodies, inhibitors, ligands or their analogues are useful as bloactive agents to treat inflammation or disease including viral, bacterial or fungal infections, allergic responses, mechanical inflammation are disease including viral, associated with trauma, hereditary diseases, lymphome or
                                                                                                                                                                                                                                                                                                                                                                                                                                       New human sphingosine kinase A, B and C polynucleotides and polypeptides useful in e.g. chromosome and gene mapping, and detecting inflammation or disease associated with abnormal levels of sphingosine kinase expression.

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is

useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food cupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences (As64197-A864964 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the printed specification and the printed specification are presented in the printed specification and the printed specification are presented in the printed specification and the printed specification are presented in the printed specification and the printed specification are presented in the printed specification and the printed specification are presented in the printed specification and the printed specification are presented and the printed specification and the printed specification are presented and the printed specification are presented and the printed specification are presented and the printed specification and the printed specification are presented and the printed specification and the printed specification are presented and the printed specification and the printed specification and the printed specification and the printed specification are presented and the printed specification and the printed specification and the printed specification and the printed specification are protectly and the printe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               265

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently cell proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g asthma), autoimmune diseases (e.g rheumatoid arthritis) and central and peripheral nervous system disorders (e.g. parkinson's disease). The present sequence represents the human sphingosine kinase-like protein

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in diagnostics, foremsics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anno acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences. AAS64197-AAS94564 represent movel human diagnostic coding sequences. AAS64197-AAS94564 represent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at (II) at the printed specification, but was obtained in the value of the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            610
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   244

PAIEVRVHCQLVRLFARGIEENPKPDSHS"
Homo sapiens cDNA sequence. This sequence was generated as part of The Wellcome Trust Sanger Institute program to isolate cDNA clones representing the full length open reading frame of well annotated protein coding genes on human chromosome 22. For more information see http://www.sanger.ac.uk/HGP/Chr22/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                142

Phasianinae; Gallus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequencing project.
This sequence is from the BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from heads, normalised, and poly A-trimmed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ProSerCysCysCysThrValSerAsnSerSerTrpAsnCysAspGlyGluValLeuHis
